### **DETAILED ACTION**

## Specification

The disclosure is objected to because of the following informalities: page 2, line 30, applicant uses claim 1. This renders the specification indefinite because claims may change throughout prosecution. Appropriate correction is required.

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ohe et al. (EP 376682A1).

Ohe et al. discloses a holding fixture (2) (tube retainer) and a laser beam-irradiating portion (3) are provided on the distal end of an optical fiber (6) for focusing the beam. Holes (5) are formed in the tube using laser irradiation.

Ohe et al. does not teach the spray arm of a dishwasher.

It would have been obvious to one of ordinary skill in the art at the time of the invention to use the tubing in a dishwasher or any device requiring a drilled tube as taught by Ohe et al. because it is merely an application of the device.

A recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Armstrong (USPN 4,420,005) in view of Ohe et al.

Armstrong discloses a dishwasher having rotatable spray arms. Holes are present in the spray arms (14). These holes are drilled in the arms.

Armstrong does not teach the type of drilling used to form the holes in the spray arms.

Ohe et al. discloses a holding fixture (2) (tube retainer) and a laser beam-irradiating portion (3) are provided on the distal end of an optical fiber (6) for focusing the beam. Holes (5) are formed in the tube using laser irradiation.

It would have been obvious to one of ordinary skill in the art at the time of the invention to use a laser to form holes, as taught by Ohe et al. in the Armstrong system because the holes can be very small which increases the water pressure and enhances the cleaning of the dishes.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over

Armstrong and Ohe et al., as stated above and further in view of Ota (USPN 6,034,349).

Armstrong and Ohe et al. do not disclose the shaping of the holes.

Ota discloses laser machining forming holes with desired shapes and sizes.

It would have been obvious to one of ordinary skill in the art at the time of the invention to form different shapes as taught by Ota in the Armstrong system because tailored holes can direct the water such that cleaning action of the dishwasher is optimized.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to M. Alexandra Elve whose telephone number is 571-272-1173. The examiner can normally be reached on 6:30-3:00 Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick J. Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
